

Promotions in Integrated Stores

Overall Process

For the menu part, it is not necessary to make any adjustment to the prices of the item(s) in promotion.

Just configure or upload the menu with the original prices (without any discount) and DiDiFood / 99Food team will help to configure the promotion through our system.

To do so, DiDiFood / 99Food and the brand need to agree on the % of the promotion that each party is assuming.

Item's Promotion

This is how a promotion of an item is shown in the order details' JSON. We provide full visibility of :

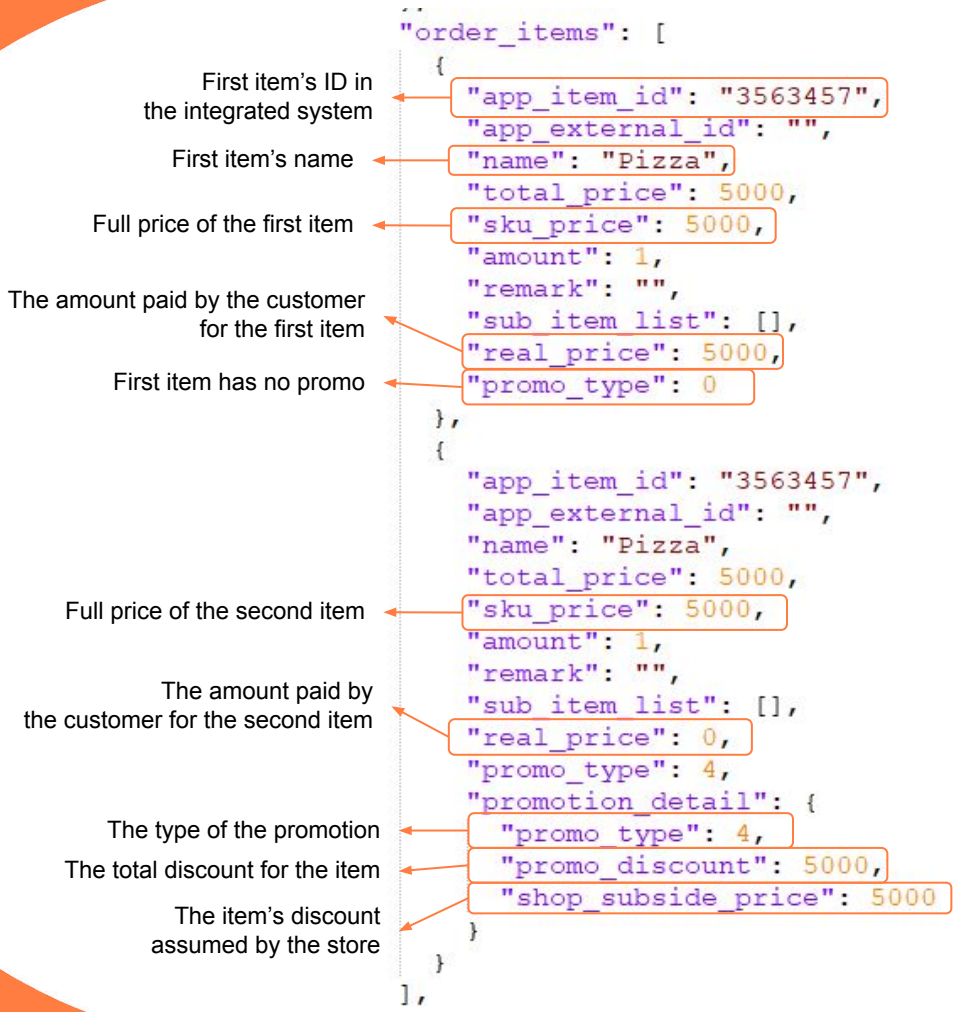

1. The total discount for the consumer = **promo discount**
2. The amount of the discount assumed by the store = **shop_subside_price**
3. The amount of the discount assumed by DiDi/99 can be obtained by subtracting **promo discount - shop_subside_price**

Buy X Get Y Promotion

For a Buy X Get Y promotion, X items with no promotion and Y items with the promotion. In the example, the promo is set to Buy 1 Get 2 and the JSON structure brings:

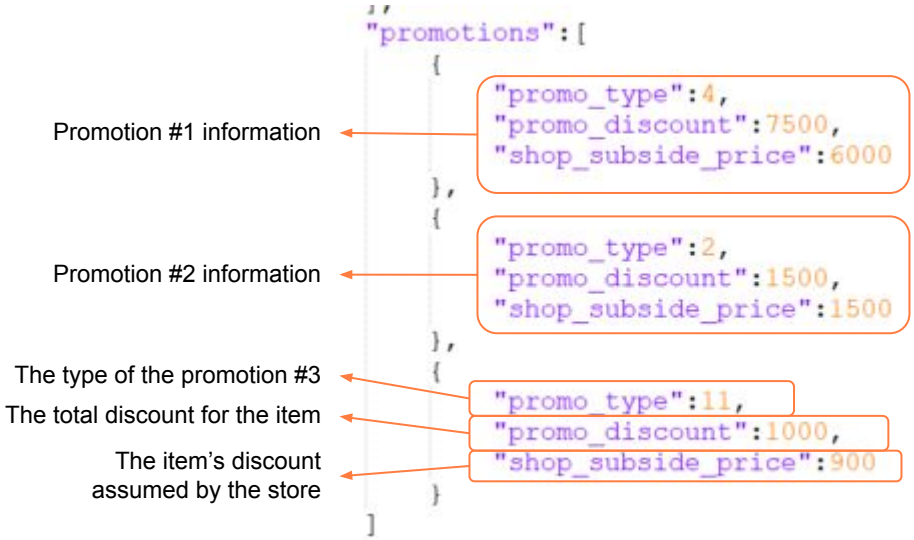

1. The total discount for the consumer = **promo discount**
2. The amount of the discount assumed by the store = **shop_subside_price**
3. The amount of the discount assumed by DiDi/99 can be obtained by subtracting **promo discount - shop_subside_price**

Promotion Summary

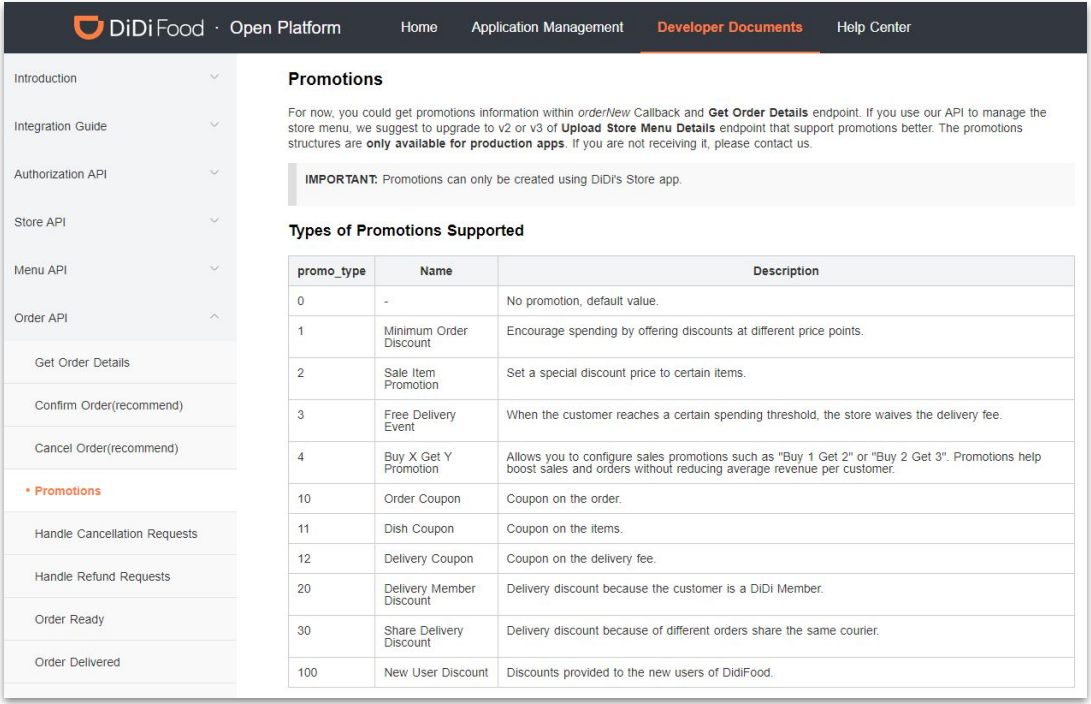

In the end of the order's JSON, we have a structure with the promotions summary. In it, is possible to see, for each promotion:

1. The type of the promotion
2. The total discount for the consumer = **promo discount**
3. The amount of the discount assumed by the store = **shop_subside_price**
4. The amount of the discount assumed by DiDi/99 can be obtained by subtracting **promo discount - shop_subside_price**

Promotion Documentation

Integrators can see all promotion documentation in our **Open Platform** website, in the Promotions page.

promo_type	Name	Description
0	-	No promotion, default value.
1	Minimum Order Discount	Encourage spending by offering discounts at different price points.
2	Sale Item Promotion	Set a special discount price to certain items.
3	Free Delivery Event	When the customer reaches a certain spending threshold, the store waives the delivery fee.
4	Buy X Get Y Promotion	Allows you to configure sales promotions such as "Buy 1 Get 2" or "Buy 2 Get 3". Promotions help boost sales and orders without reducing average revenue per customer.
10	Order Coupon	Coupon on the order.
11	Dish Coupon	Coupon on the items.
12	Delivery Coupon	Coupon on the delivery fee.
20	Delivery Member Discount	Delivery discount because the customer is a DiDi Member.
30	Share Delivery Discount	Delivery discount because of different orders share the same courier.
100	New User Discount	Discounts provided to the new users of DidiFood.
